

Resourceful business partner.

We've probably built enough different products in our 60-plus year history to fill a football field at least once and maybe more. That's a lot of customers, a lot of components, and a whole lot of confidence!

Why do so many companies rely on Anderson Technologies for plastic injection molding and contract manufacturing?

"You know what you're doing."

"You help us differentiate our products."

"You're interested in our business and want us to succeed."

"You have great prototyping tools that help us make smart design choices."

Intense customer partnership is part of our corporate DNA. We get involved in every step of the product development lifecycle and use our expertise to help you think about materials, evaluate design options, develop and review prototypes, design cost-effective molds, design products for manufacturability (DFMEA), prevent warranty problems, and much more.

A partner is "someone who is on your side." If your business could use another team member, we'd love to talk with you.

A partner is
"someone who is on your side."

If your business could use
another team member,
we'd love to talk with you.

Thinking Green

You may be surprised to learn how Anderson Technologies can help you and your products be more environmentally friendly. Biodegradable plastics, organic fillers, plastics made from sustainable materials, and recycled materials can all make injection molding several shades greener than you might imagine.

We can help you and your products be more environmentally friendly; create molds that maximize yield and minimize waste; set up systems to reclaim scrap material; allow for recycling at the end of the product's useful life; or design for biodegradable materials.

Anderson Technologies is creating sustainable solutions for many leading companies that are seeking to reduce, reuse and recycle in all phases of their business. We'd like to journey that path with you.

Let's Get Started
